

EURORACK MODULE

FUNCTION: Utility: volt meter

DIMENSIONS: 2HP - 41 mm deep (including inserted power cable)

CURRENT DRAW: 65 mA @ +12V - 8 mA @ -12V - 0 mA @ 5V

Both jacks sockets are in parallel, so select one for the input signal and the other for the output signal.

Each LED represents 1 volt (red for positive range and blue for negative range).

The button toggles between plain mode (default) or dot mode.

This is not a fancy VU meter, it has a linear response and is designed to measure voltages to help you understand what's going on with your control voltages.

Reverse polarity protected
